

Discharge Continuous Monitoring from ED/Inpatient

Goal: Use continuous monitoring to augment a safe discharge for highly suspicious PUIs and/or COVID positive patients with moderate severity presentation (pneumonia...).

Qualified patients: Symptomatic, clinically stable patients (no moderate or severe respiratory distress) and hemodynamically stable.

Process:

1. Provider recognizes patient that may be discharged and has moderate disease progression while remaining hemodynamically stable
2. *Discharge Continuous Monitoring for COVID with Masimo SafetyNet Monitor* ordered in Cerner
3. RN places SafetyNet Monitor on patient and explains process with education
4. RN adds patient to Masimo Dashboard by app invite
5. Maximum of 12 days
6. Continuous monitoring staff contacts patients daily and if there is a deterioration of monitored vital signs real time escalation to e-ICU provider

Can be synergistic with:

1. *Accessible Home O2 (Consult Social Work- it requires HHC visit)*
2. *Requires:*
 - a. *Home health care visit (Consult Social Work)*
